BSPSoftware

MetaManager™ at a Glance – Bundle Highlights

Accelerate | Success | Technology | bspsoftware.com

Update

- Validate all reports in both Public and My Folders in a bulk & automated fashion
- Apply bulk changes/fixes of query items, logos, text, javascript etc. to reports/objects
- Review and update attributes of any object in the content store.
- Manage stored prompts
- Bulk edit Framework Manager models
- Create and maintain IBM® Cognos® Power Cube® datascource connections
- Replicate and standardize report header and footer information

Deploy

- Flexible backup and restore options that can be scheduled
- Restore content to different locations
- Easily promote any object to another environment
- Extract report outputs from the content store to a Windows file system
- Distribute portal tabs & user preferences to groups, roles and users

Secure

- Standardize and cascade security assignments
- Document memberships and access rights
- Export Security Audit to a database for reporting
- Replicate security assignment from one account to another
- Synchronize security across environments
- Adjust memberships with a drag & drop interface
- Export & import groups via spreadsheets
- Change database passwords across environments simultaneously

Document

- Document the content store to PDF, HTML, Excel or directly to a database
- Report on general information, ownership, security, memberships, usage, history, etc.
- Document Framework Manager model to PDF, HTML & Excel
- Report documentation including data items, filters, prompts and lineage
- Lightning fast report searches for quick impact analysis.
- Drillable chart of content store object size and quantity
- Canned reports for quick and easy valuable auditing, schedule extraction and much more

Performance

- **Dashboard** - Real-time information on: server availability, CPU usage, and memory consumption across the infrastructure. At-a-glance Cognos health information such as: datasource validation, running tasks, and Active Content Manager status.
- **Validation** - Detailed audit information on reports, jobs, user logons, and datasources.
- **Services** - Stop, start, and restart services across multiple environments remotely.
- **Tuning** - View and update IBM Cognos Administration tuning settings across multiple dispatchers simultaneously.
- **Load** - Simulate user activity to test tuning changes within an IBM Cognos environment.

BSPSoftware

MetaManager™ at a Glance – for IBM® Cognos®

Accelerate | Success | Technology | bspsoftware.com

Security Migration Self Service

Migration on your own, on your timelines, at your convenience!

Migrating from a legacy IBM Cognos security source to another is far from trivial. The challenge is that a user in the old security source is not the same user in the new security source, and as a result none of the user's permissions, preferences or My Folders content will carry over to the new namespace.

Check out an SMSS video here:

bspsoftware.com/SMSS

Check out an API example here:

bspsoftware.com/API

This self-service covers mappings from:

- Framework Manager Model Security
- Transformer Model Security
- My Folders Content
- Preferences
- Portal Pages
- Schedules
- Membership
- Capabilities
- Policies
- Ownership
- And Many More Properties

This self-service offering includes:

- 45 days of unlimited use of the solution.
- Unlimited environment usage, so you can migrate as many as you need to.
- Access to certain MetaManager modules to assist in the process.
- Premier customer support to get you going in your hour of need!

MetaManager API

When one size doesn't fit all!

Take the power of MetaManager and overlay your business processes exactly how you want them to be run.

Adapt

Easy to use access to common tasks within IBM Cognos such as modifying security memberships and updating prompts on reports.

Process

Here's a couple of repetitive tasks that our customers have automated:

- *Synchronize security with a spreadsheet or a database*
- *Push button to create folder structures for a new project*
- *Create Report Views with pre-defined prompt*
- *Allow users to unsubscribe from report schedules*
- *Enforce naming conventions across a project*

Integrate

Scripts are created using the familiar and easy to use JavaScript scripting language.

Integrate new features in IBM Cognos Connection using a simple ASP.Net webpage.

No compilation. No Jar files. No headache to maintain.
